Newsletter – VR special

At Simon Marks, we went on an out-of-this-world adventure with our Virtual Reality Space Workshop. Pupils blasted off into the cosmos as young astronauts, exploring the wonders of our universe from the comfort of their classroom.

In this immersive experience, students donned VR headsets to journey through the vast expanse of space, visiting gas giants and dwarf planets, as well as moons within our solar system. Guided by an expert educator, they learned about the planets and the solar system, delving into the mysteries of outer space in an engaging and interactive way.

As the virtual reality space workshop unfolded, pupils of all ages were swept away by the immersive adventure.

"It was fun because we learnt about space." – Zenabe (Year 1)

"I liked the technology, it was really cool." – Ru (Year 1)

"I liked learning about Venus and how we would be crushed by its atmosphere." – Jonathan (Year 2)

"I liked learning about Mars and why it is red. It's because it has a lot of iron. – Elijah (Year 2)

"I liked it because it felt like I was actually in Space!" – Raphael (Year 4)

"It felt so real and I thought I was going to fall into space but I liked that feeling!" – Bilge (Year 4)

"It was an amazing experience." – Ariella (Year 3)

"It was fun to learn about the solar system!" – Tommy (Year 5)
